QEEPP

Portfolio Governance Assessment Scorecard

The Five Structural Layers of Disciplined Transformation

Instructions

For each active transformation initiative or portfolio, rate each layer on a scale of 1–5:

1 = Ad hoc / unstable / reactive
2 = Emerging / inconsistent / emerging
3 = Defined / partially controlled / repeatable
4 = Managed / measurable / tracked
5 = Institutionalized / optimized / self-sustained

If a lower layer scores below 3, scaling in upper layers should be constrained.

---

1. QUALITY — Structural Integrity

Objective: Ensure foundational stability before acceleration.

□ Architecture standards defined and enforced
□ Security controls embedded and monitored
□ Data quality and ownership clearly defined
□ Technical debt identified and tracked
□ Platform reliability meets defined thresholds

Score (1–5): ___

Risk if weak: Scale amplifies instability and fragility.

---

2. EFFECTIVENESS — Strategic Alignment

Objective: Ensure initiatives drive measurable business value.

□ Clear business outcomes defined
□ Capabilities mapped to strategy
□ Value streams explicitly identified and stakeholders aligned
□ Success metrics agreed and documented
□ Initiative prioritization aligned to impact

Score (1–5): ___

Risk if weak: Efficiency and scale amplify irrelevance.

---

3. EFFICIENCY — Operational Optimization

Objective: Remove waste after alignment is secured.

□ Cost transparency established (FinOps visibility)
□ Redundant systems identified and rationalized
□ Automation opportunities implemented
□ Process bottlenecks measured and addressed
□ Resource allocation aligned to priorities

Score (1–5): ___

Risk if weak: Operational friction constrains performance.

---

4. PERFORMANCE — Measurement & Governance

Objective: Institutionalize accountability and visibility.

□ KPIs and OKRs formally defined
□ Performance dashboards operational
□ Governance cadence established
□ SLA/SLO compliance monitored
□ Risk and compliance reporting standardized

Score (1–5): ___

Risk if weak: Scale proceeds without accountability.

---

5. PRODUCTIVITY — Sustainable Scale

Objective: Expand capability without degradation.

□ Reusable platforms and components leveraged
□ Self-service capabilities enabled
□ Automation scaled across teams
□ Workforce enablement structured
□ Growth does not degrade quality or control

Score (1–5): ___

Risk if weak: Scale increases cost and complexity without net gain.

Structural Dependency Rule

If:

Quality < 3 → Constrain scaling initiatives
Effectiveness < 3 → Pause optimization efforts
Efficiency < 3 → Limit performance expansion
Performance < 3 → Restrict productivity acceleration

Scale only when structural integrity is sustained.

Portfolio-Level Summary

Quality Score: ___
Effectiveness Score: ___
Efficiency Score: ___
Performance Score: ___
Productivity Score: ___

Lowest Layer Score: ___

Structural Readiness for Scale:
□ Not Ready
□ Partially Ready
□ Ready with Constraints
□ Ready to Scale

Executive Interpretation

QEEPP does not measure activity.
It measures structural readiness.

Sustainable scale capacity is constrained by the lowest-scoring layer.
The lowest-scoring layer defines overall transformation readiness.
